

Antipollution insert checkvalve - EB type
System 01

Technical Data Sheet

Description

CO checkvalves are compliant with the regulation of NF Antipollution brand.

According to the NF EN 1717, these EB type checkvalves, are incorporated in a device, and guarantee the protection of drinking water against a risk of pollution from a fluid of category 2.

- Minimum head loss
- Noiseless operation due to a split obturator
- Does not generate hammering
- Easy incorporation due to an already mounted O'ring
- Meets the requirements of all europeans approvals
- Axial guidance oburator with return spring
- Absolute sealing at high or low back pressure ensured by an especially designed lip-seal

Important notice :

The temperature and pressure indications given for the various categories of fluids (L1/L2/G1/G2) are under no circumstances a guarantee that they are suitable for your system. Therefore, it is essential to validate the use of the products under given operating conditions with our technical department.

In addition, the operating instructions are available on our website www.socla.com or by simply asking our sales department.

Technical features

Operation temperatures	Continuous -10°C up to 65°C / Maxi. : 85°C (in case of an accidental peak during 1h)
Permissible operating pressure (PFA) in water	See table above
Maximum permissible pressure (PS) other mediums	See table above
Connection	Incorporation in a device
Mediums	Clear liquids, drinking water, neutral gaz

Nomenclature and materials

N°	Description	Materials
1	Body	POM
2	Guide	POM
3	Obturator	POM
4	Seal	EPDM
5	Spring	Stainless steel
6	O'Ring	EPDM

Approvals

International Construction Standards :

Specific NF brand regulation (technical doc. n°6 : antipollution checkvalve)
NF EN 13959

Application

CO checkvalves protect the drinking water network from backflow due to back pressure or back siphonage.
CO checkvalves are incorporating in :

- Sanitary taps (kitchen, bathroom etc..)
- Thermostatic mixing valve (INSTAmix)
- Water meter
- Vending machine (coffee machine, water cooler, beverage dispenser...)
- etc ...

Fonctionnement

Some vibrations can occur at low flow rates. These vibrations are generated by possible lateral movements of the valve.
Until now it was impossible to avoid this effect without affected hydraulic characteristics.

Thanks to the unique guide system by slotted stem that eliminates the possibility of movements and optimal hydraulic profile, vibration are eliminated.

By providing this guidance without the possibility of movements avoids calcareous deposits and vibration, ensuring a flowless and quiet operation for years.
